Email Discovery in Employment Law Case - Over 90,000 Emails Reviewed

CHALLENGE

A boutique law firm headquartered in California with clients spread across the globe sought assistance from Lawstore for email discovery in one of their employment law cases where the plaintiff had alleged wrongful termination from employment. The firm required Lawstore to specifically extract emails to substantiate poor performance at the plaintiff's end.

The law firm shared all the emails with Lawstore on sync.com in pst format, in three separate links. Each link had documents amounting to a file size of around **9 GB**. To put the file size into perspective, allow us to share a fun fact. A rough estimate shows that the amount of text in about **900** encyclopedia volumes with **44 million** words in each volume, measured in file size, would be close to **10 GB**.

Needless to say, the eye of the storm in this matter was the overwhelming number of files—**98,284** emails—that were to be reviewed in **45 days**.

SOLUTION

An offshore team of two Associates under the supervision of the offshore Lead Attorney were designated for this project.

Combining our team's expertise with our advanced legal-tech partner ecosystem rendered the task at hand convenient to handle and surmount:

- » The project was successfully completed by using machine learning technique called sentimental analysis for the segregation of emails.
- » The segregation process eliminated duplicates and reduced the number of emails for review.
- » The ai-powered document reviewing tool ran the search for 98,284 emails with 98% accuracy, requiring manual intervention only at the time of the final sorting.

The final deliverable product was specifically named pdf portfolios i.e., performance, discipline and training with relevant email extracts and an excel sheet with the details of portfolios. The client was sent drafts of the work before final submission to ensure quality of the final work product.

RESULT

The client was able to locate the relevant emails with a simple, quick-search without needing to understand the tech-mechanism or having to engage their attorneys in an otherwise lackluster and time-intensive task if executed without the right legal-tech experts and solutions. The project was completed within a quick turnaround time of a month.
